

Table of contents

1. Introduction	01
2. Objectives	08
3. Materials and Methods	09
Calculations for Mooring Anchors	
3.1 Preparation of mooring line	16
3.2 Preparation of Anchorages	16
3.3 Site selection for deployment	18
3.4 Deployment of FADs	20
3.5 Monitoring of FAD	22
3.5.1 Field sampling method and laboratory analysis	22
4. Results	25
4.1 Water quality changes	25
4.2 Species composition	35
4.3 Species composition	45
4.4 Recorded fouling organisms	48
5. Discussion	50
6. Conclusions	55
Reference	56
Appendix 01	59
Appendix 02	60

List of Figures

Figure 1 Highest Yellow fin tuna catches recorded area within Exclusive	07
Figure 2 Preparation of floating part of FAD	15
Figure 3 (a). Reinforcing cage (b). Placing reinforce cage (c). Pouring concrete in to the wooden mould (d). Keeping anchors for settlement	17
Figure 4 Selected two sites at Trincomalee area	20
Figure 5 Schematic Diagram of deployed FAD	21
Figure 6 (A) Deployment of Anchor (B) Deployment of floating part	22
Figure 7 onboard sample collection	23
Figure 8 under water sample collection	23
Figure 9 under water recording	23
Figure 10 Attached fishing nets on mooring line	23
Figure 11 Average values of Conductivity changes	25
Figure 12 Average values of Dissolved Oxygen changes	26
Figure 13 Average values of Turbidity	27
Figure 14 Average values of Biological Oxygen Demand	27
Figure 15 Average values of NO ₂ -1 concentration	28
Figure 16 Average values of NO ₃ -1 concentration	29
Figure 17 Average values of PO ₄ +3 concentration	30
Figure 18 Average values of NH ₄ + concentration	30
Figure 19 Average values of Total Suspended Solids	
Error! Bookmark not defined.31	
Figure 20 Changes of physico chemical parameters and fish species count during the study period at FAD 1	32
Figure 21 Changes of physico chemical parameters and fish species count during the study period at FAD 2	33
Figure 22 Changes of physico chemical parameters and fish species count during the study period at Reference point	
Error! Bookmark not defined.34	
Figure 23 Species composition change at FAD 1 Error! Bookmark not defined.	
37	
Figure 24 Species composition changes at FAD 2	38
Figure 25 Count of fish families of FAD1 with the time	38
Figure 26 Count of fish families of FAD2 with the time	39

Figure 27 Count of fish families of Reference point with the time	40
Figure 28 Percentage distribution of fish families at FAD 1	41
Figure 29 Percentage distribution of fish families at FAD 2	42
Figure 30 Number of fish species present in each trophic level at the two FADS and the reference point	43
Figure 31 Number of demersel and pelagic fish species observed at two FADs and the Reference point	43
Figure 32 Observed fish species during the survey	44
Figure 33 Scattered eggs on mooring line	44
Figure 34 Fouling agents observed in FADs	47

List of Table

Table 1 List of species observed and associated with samplin sites	35
Table 2 FAD 1 Presence of fouling organism within the study period	48
Table 3 FAD 2 Presence of fouling organism within the study period	49
